I am Andre Mendonca, a web developer focused on Front End technologies such as React JS, JavaScript, HTML/SCSS and UI Design who has studied for more than 2 years and accomplished several hours of work in order to build my own applications and websites and enhance my knowledge.

You can check my projects at my portfolio: andremendonca.me

Experience and Projects

- Use of **React JS** to create "The Safe", a financial tracker application where I handled React **Hooks** like useEffect, useRef and useState to create reactive and unique states of elements. Construction of a Global Storage of data and variables in order to spread all useful information through a **Context** with useContext.
- Use of several **JavaScript** functionalities in "Fantastic Animals" divided into JS **Modules** such as Mobile Menus, Tab Navigation, Modals, Tooltip, Mutations and a variety of page Animations in a clear and modern syntax. In addition, strong knowledge of asynchronous JS using **Promises**, Async/Await and **Fetch** to gather information from Live APIs like Bitcoin Price and PokeAPI.
- Robust experience with **HTML/CSS** to create "Giancarlo", a traditional fancy restaurant. Built using variables and mixins from **SASS/SCSS** to recycle code along with a faster development process.
- Creation of a website with fully adaptable content using **CMS** to edit, delete or add information. Use of **PHP** and **WordPress** to develop custom fields and personal themes.

Education

Information Technology Certificate IV   *Sep 2022 - Now*
Wells International College

Cambridge Advanced English Course   *Apr 2022 - Aug 2022*
Lexis English College

Portuguese - Fluent   English - Advanced
